

-3-

1 11. A in variable condition responsive sensor system having a plurality of
2 variable condition sense elements, the method of comprising:
3 forming each of the sense bridge elements into two portions, each portion
4 having an output node,
5 separately conditioning output signals from each output node of a selected
6 sense element,
7 comparing the separately conditioned signals of the portions of the selected
8 sense element with each other to determine whether the conditioned signals come
9 within selected tolerance bands.

Remarks

The claims are being amended to more clearly define the invention.

Respectfully submitted,
